

To the Public Service board;

Thank you for considering an investigation into the problems with sound levels that are affecting the lives of people living around the existing large energy projects.

We firmly believe that a workshop should be devoted to the sound and health issues and other impacts to the neighbors of these facilities to include information from personal experiences.

With the large size of the installations that are being permitted, we feel this issue has been completely underestimated.

We suggest a statewide workshop in Montpelier and workshops in the areas affected where they have already been installed.

Sincerely

Don and Shirley Nelson
