

To the State of Vermont service Board, docket # 8167.

To the response of proposed scope of issues.

In response to question number three.

3. What can be learned about actual sound impacts from existing energy facilities located in Vermont?

This is a vital question and we must expand it to actual sound impacts from existing energy facilities from Vermont, other states and countries. We must look at any studies that have been done concerning sound levels, frequency levels and the effects of vibrations in the ground.

This is a question that concerns us:

An issue that the board seems to step around is the issue of sound effects on wildlife, birds and bats and aquatic life.

One question that needs to be answered: What are the noise/frequency levels that wildlife, birds, bats and aquatic life can tolerate in order to function in their environment. If humans have had problems with noise levels and frequency levels then animals, birds, bats and aquatic life must have a impact upon them. We must discuss this issue.
