

Dear PSB,

Please accept this complaint about the Kingdom Lowell Wind project.

I live approximately 4 miles west of the industrial wind farm in Lowell Vermont, at 1300 feet elevation on the Mines Rd.

Since the wind farm has been up and running there has been an increase in low frequency noise, especially late at night when other back ground noise has diminished. It can be Very Annoying , many times it does not stop and follows you all around my property, It puts a pressure on your ears that you just want to escape from any way you can!!!!

Also There has been an increase in the back ground noise sometimes loud enough where I can here them over the sound of my own little roof top turbines. That is some LOUD BACK GROUND NOISE if I can here the Lowell wind farm from 4 miles away over my own that are also producing but only 50 FEET away!!!!!! Yes Long Island Back round noise.

The luck of the draw, Thank-God I just happen to build what would come to be 4 miles away when the Industrial Farm was released on us. Those poor unfortunate souls that have to live closer. You could not pay me to live there, closer,,,what does that make their property worth? They will have to divulge adverse effects effecting the property when and if they sell?? what will they say?.

That the Site and Sound pollution from industry is obscene around here.

Time will show these Monolith s that collect 100,000++ Horse Power in trade for permission to carbon pollute elsewhere has ruined our town of Lowell Vt.

Kind Rgrds, Ed Wesolow.
