PUBLIC SERVICE BOARD

Docket No. 7256

Investigation into Barton Village Inc. Electric)
Department's proposed Successor Service Quality and)
Reliability Performance, Monitoring and Reporting Plan)

Order entered: 1/22/2007

ORDER APPROVING SUCCESSOR SERVICE QUALITY AND RELIABILITY PLAN

I. INTRODUCTION

In this Order, we approve the proposed Successor Service Quality and Reliability Performance, Monitoring and Reporting Plan ("Service Quality Plan") that was filed by the Barton Village Inc. Electric Department ("Barton") on December 20, 2006, with the clarification that Barton shall ensure that any service quality compensation dollars paid pursuant to the Service Quality Plan¹ benefit Barton's electric customers. In addition, we require that Barton either file an amendment to the Service Quality Plan that includes worker-safety performance measures or explain why such performance measures are inappropriate for Barton.

II. PROCEDURAL HISTORY

On January 20, 2006, Barton filed a proposed Successor Service Quality and Reliability Performance, Monitoring and Reporting Plan with the Public Service Board ("Board"). In the interest of minimizing litigation costs, the Board took no action on Barton's proposed successor service quality plan while it considered a substantially similar plan for another municipal electric utility.

1. The Service Quality Plan includes a service quality compensation mechanism, which is a points-based mechanism that provides for additional payments to customers affected by poor service. Typically this mechanism is used for large-scale service-quality deficiencies (such as phone answering and reliability) where it is hard to identify specific individuals who were affected.

After the Board ruled on this plan for another municipal electric utility, 13 municipal electric utilities² asked the Board to hold a hearing, meeting or workshop to discuss the utilities' thoughts and ideas on the issue of including service guarantees and service quality compensation mechanisms in their service quality plans. The Board held a workshop to discuss these issues on July 19, 2006.³

On September 8, 2006, the Board issued a memorandum following up on that workshop. In that memorandum, the Board provided the 13 municipal utilities with 60 days to file any modifications to the proposed plans they filed with the Board earlier in the year. The Board stated that after that time period, it would open dockets to review whatever proposed plans were then on file with the Board.

On December 20, 2006, Barton filed its Service Quality Plan.

On January 5, 2007, the DPS filed a letter recommending that the Board approve Barton's proposed Service Quality Plan. The DPS also recommended that the DPS provide training to Barton to ensure a clear understanding of the implementation of the Service Quality Plan. Finally, the DPS recommended that the Service Quality Plan be reviewed in one year to determine its effectiveness, and what changes should be considered.

III. FINDINGS

1. The proposed Service Quality Plan establishes performance measures in six broad areas of service that have a substantial impact on consumers: call answering; billing; meter reading; work completion; customer satisfaction; and reliability. The proposed Service Quality Plan includes baseline levels for each performance standard. Service Quality Plan at 3-7.

2. The 13 municipal electric utilities include: Barton Village Inc. Electric Department; Village of Enosburg Falls Water & Light Department; Town of Hardwick Electric Department; Village of Hyde Park Electric Department; Village of Jacksonville Electric Company; Village of Johnson Water & Light Department; Village of Ludlow Electric Light Department; Village of Lyndonville Electric Department; Village of Morrisville Water & Light Department; Village of Northfield Electric Department; Village of Orleans Electric Department; Town of Readsboro Electric Light Department; Town of Stowe Electric Department; and Swanton Village Inc. Electric Department.

3. While Barton was one of the utilities that requested the hearing, meeting or workshop, no one from Barton attended the workshop.

2. The proposed Service Quality Plan establishes measurement and reporting protocols for the performance standards. Service Quality Plan at 2-3.

3. The proposed Service Quality Plan includes service guarantees⁴ covering line crew appointments, meter work, and delay days. Service Quality Plan at 7-8.

4. The proposed Service Quality Plan includes a service quality compensation mechanism. Service Quality Plan at 8-9.

5. The proposed Service Quality Plan provides that it will be in effect from the beginning of the first quarter following approval by the Board until modified by subsequent Board order. The proposed Service Quality Plan states that Barton and the DPS agree to review the Service Quality Plan after it has been in effect for one year, and every two years thereafter, to determine the need for any modifications of measurements or performance levels. Service Quality Plan at 1.

6. The proposed Service Quality Plan provides that Barton will:

- notify all its ratepayers, in writing, that it has a Service Quality Plan in effect, and describe the purpose and general detail of the Service Quality Plan;
- present, for review and discussion, the service quality quarterly report that is filed with the DPS and the Board at the first meeting of Barton's governing body that follows the filing of that report; and
- publish a section about service quality and reliability, including Barton's annual service quality report that is filed with the DPS and the Board, in Barton's Annual Report.

Service Quality Plan at 8.

IV. DISCUSSION

Our authority to approve service quality plans stems from 30 V.S.A. §§ 209(a)(1), 209(a)(3), and 219. As we stated in our order approving a service quality plan for Central Vermont Public Service Corporation:

Section 219 of Title 30 requires electric utilities (and other regulated companies) to "furnish reasonably adequate service, accommodation and facilities to the

4. Service guarantees require a utility to provide specified bill credits to individual customers if the utility does not meet certain service commitments to those customers.

public." Vermont law gives this Board the authority to set standards regarding this utility obligation. Specifically, 30 V.S.A. § 209(a)(1) gives this Board jurisdiction over "[t]he . . . quality of any product furnished or sold by any company subject to supervision under this chapter," and 30 V.S.A. § 209(a)(3) provides jurisdiction over "[t]he manner of operating and conducting any business subject to supervision under this chapter, so as to be reasonable and expedient, and to promote the safety, convenience and accommodation of the public[.]" Taken together, these statutory provisions establish the basis for service quality and reliability standards by which the adequacy of service can be measured in order to determine whether a company is, in fact, providing "reasonably adequate service" and is operating its business in a "reasonable and expedient" manner that "promotes the safety, convenience, and accommodation of the public."⁵

After reviewing Barton's proposed Service Quality Plan, we conclude that the service quality and reliability standards included in Barton's Service Quality Plan do just that — they enable the Board to measure Barton's performance in certain areas that are important to customers, and thus to ascertain whether Barton is providing "reasonably adequate service." The standards included in Barton's Service Quality Plan are substantially similar to those previously approved by the Board for other Vermont electric utilities, and we are persuaded that the differences are the result of lessons learned from Barton's and other municipal utilities' experiences with service quality plans.

However, we note that Barton's proposed Service Quality Plan does not include any performance measures related to worker safety. All service quality and reliability plans previously approved by the Board, except those for utilities that do not employ their own line crews,⁶ have included worker-safety performance measures. Since Barton's original service quality plan included worker-safety performance measures,⁷ we believe that the omission of worker-safety performance measures in the proposed Service Quality Plan was unintentional. Accordingly, we require Barton to file either an amendment to its Service Quality Plan that

5. Dockets 6120/6460, Order of 6/26/01 at 44.

6. The utilities that do not employ line crews contract with another entity for the provision of line crew services.

7. Barton's original service quality plan was approved by the Board in its 10/11/01 Order in Dockets 6033 and 6327.

includes worker-safety performance measures or an explanation why such performance measures are no longer appropriate for Barton.

Service Quality Compensation Mechanism

The service quality compensation mechanism set forth in the Service Quality Plan is similar to that in effect for other utilities. The Service Quality Plan specifies how to calculate service quality compensation points, divides the service quality compensation points into two categories (reliability and other measures), and provides a sliding scale for determining the dollar value assigned to the service quality compensation points in each category. The Service Quality Plan also specifies the processes that will be followed for determining the amount of service quality compensation dollars that should be paid each year, and who should receive the dollars.

Paragraph V.6 of the Service Quality Plan states that "Service quality compensation dollars shall be paid to community service activities." As we noted when considering a similar provision for another municipal electric utility,⁸ the purpose of the service quality compensation mechanism is to compensate Barton's ratepayers in the event Barton provides them with poor service. Accordingly, we will require Barton to select "community service activities" that benefit Barton's electric ratepayers. Because Barton, like most municipal electric utilities, serves ratepayers outside the Village boundaries, the selected community service activities must benefit the larger community served by Barton, not just Village residents.

Under the Service Quality Plan, the maximum amount that Barton will pay to customers each year as a result of the service quality compensation mechanism will be 0.1% of Barton's annual revenues for the 12-month reporting period.⁹ This amount will be offset by any monies paid to customers through the Service Quality Plan's service guarantees. The cap on Barton's service quality compensation is the same percentage that we previously approved for another

8. Docket 7126, Order of 7/12/2006 at 3.

9. For 2005, the estimated amount at risk would be \$2,222 for a maximum of 150 service quality compensation points.

municipal electric utility.¹⁰ In light of the fact that Barton's Service Quality Plan was the result of a settlement between two parties with opposing interests, we conclude that the annual cap on Barton's service quality compensation is acceptable at the present time.

DPS Recommendations

The DPS recommended that it provide training to Barton regarding the implementation of the Service Quality Plan. We are persuaded that such training could be helpful. We have heard many municipal utilities express concern regarding the administrative costs associated with implementing service quality plans. Training provided by the DPS could help minimize misunderstandings regarding how to implement the plans, and thereby help minimize costs associated with the plans' implementation. Accordingly, we require Barton to coordinate with the DPS regarding such training.

The DPS also recommended that the service quality plan process be reviewed in a year. The Service Quality Plan itself provides that Barton and the DPS will review the Service Quality Plan after it has been in effect for one year (and every two years thereafter) to determine the need for any modifications of measurements or performance levels. We approve the DPS's request to expand the one-year review to include the effectiveness of the service quality plan process, and consideration of possible modifications. If such review leads either party to propose modifications to the Service Quality Plan, we will consider them at that time.

Effective Date of Service Quality Plan

The Service Quality Plan states that it will take effect with the beginning of the first quarter following approval by the Board. While the Board had hoped to be able to rule on the Service Quality Plan in December (which would have enabled the Service Quality Plan to take effect January 1, 2007), it was unable to do so because it did not receive the DPS's recommendation regarding the Service Quality Plan until January. As a result, under the terms of the Service Quality Plan, it will not take effect until April 1, 2007.

10. The annual cap on service quality compensation for the Village of Morrisville Water and Light Department ("Morrisville") is 0.1% of Morrisville's annual revenues. Docket 7126, Order of 7/12/06 at 3-4.

However, the Board is aware that it may be administratively more efficient for a utility's service quality plan to take effect at the beginning of a calendar year. For example, the reliability performance standards are only required to be calculated on a calendar-year basis, and they may need to be calculated on a "service quality plan year" basis (if the service quality plan year is not a calendar year) in order to determine whether the utility owes any service quality compensation dollars. The Board does not wish to require a utility to perform any additional calculations. Therefore, the Board requires Barton to notify the Board within 10 business days of this Order's issuance whether it elects to begin reporting under its Service Quality Plan as of January 1, 2007 (so that its reports would be on a calendar-year basis), or as of April 1, 2007 (which is the date provided for under the terms of the Service Quality Plan).

If Barton chooses to begin reporting as of January 1, 2007, the effective date of the Service Guarantee section of the Service Quality Plan must be a later date. That is because implementing the service guarantees will require Barton to modify its tariffs, and such modifications cannot be made retroactively. Therefore, if Barton chooses to begin reporting as of January 1, 2007, the Board requests that Barton propose a prospective effective date for the Service Guarantee section of the Service Quality Plan (no later than April 1, 2007, which is the date the Service Guarantees would go into effect under the terms of the Service Quality Plan). The proposed effective date should be filed at the same time that Barton informs the Board that it chooses to begin reporting as of January 1, 2007 (only if Barton chooses to begin reporting on that date).

V. CONCLUSION

For the reasons stated above, we approve the Service Quality Plan that was filed by Barton on December 20, 2006, with the clarification that Barton shall ensure that any service quality compensation dollars paid pursuant to the Service Quality Plan benefit Barton's electric customers.

VI. ORDER

IT IS HEREBY ORDERED, ADJUDGED AND DECREED by the Public Service Board of the State of Vermont that:

1. The Successor Service Quality and Reliability Performance, Monitoring and Reporting Plan ("Service Quality Plan") that was filed by Barton Village, Inc. Electric Department ("Barton") on December 20, 2006, is hereby approved.

2. When selecting a community service activity to receive service quality compensation dollars, Barton shall ensure that any service quality compensation dollars paid pursuant to Paragraph V.6 of the Service Quality Plan benefit Barton's electric customers (not just Village residents).

3. On or before February 5, 2007, Barton shall file either an amendment to its Service Quality Plan that includes worker-safety performance measures or an explanation why such performance measures are no longer appropriate for Barton.

4. On or before February 5, 2007, Barton shall notify the Board whether it elects to begin reporting under the Service Quality Plan on January 1, 2007, or April 1, 2007. If Barton elects to begin reporting on January 1, 2007, Barton shall also propose a prospective effective date, no later than April 1, 2007, for the Service Guarantees portion of the Service Quality Plan.

5. On or before February 9, 2007, Barton shall file revised tariffs implementing the Service Guarantees provided for in the Service Quality Plan.

6. Barton shall coordinate with the Vermont Department of Service ("DPS") regarding the training that the DPS has proposed related to the implementation of the Service Quality Plan.

Dated at Montpelier, Vermont, this 22nd day of January, 2007.
